Security Services

ITIQ provides enterprise security solutions that includes both physical and network security. This integration of security services provides the most secure method for thwarting unwanted access to your information assets. **ITIQ provides a complete range of services to assess your security risks, design systems to secure your enterprise, and monitor your security systems to insure they remain effective.** After deploying such systems, ITIQ's security experts will train your staff and lead a security awareness campaign to include participation of every company employee in the program.

ITIQ Security Services, include the following:

- **Vulnerability & Penetration Testing**

ITIQ provides complete security assessment services for determining the vulnerability level of your company systems. ITIQ vulnerability testing can identify system weaknesses and recommend changes hopefully before significant damage is done.

- **Firewall & Network Intrusion Detection Systems (IDS)**

ITIQ designs networks with firewall systems and monitors such systems for proactive thwarting of unauthorized access attempts. Our security experts use state-of-the-art Intrusion Detection Systems to analyze data from multiple sources as used to halt and protect your systems from unauthorized attacks.

- **Spam & Surf Control**

ITIQ can design systems to minimize unsolicited e-mail sent to your company's employees. ITIQ can also recommend systems to monitor and block the access of your employees to undesired web sites. Such company control can provide a significant increase to employee productivity.
